

PRESS RELEASE  
FOR IMMEDIATE RELEASE

Riccione RN ITALY.

Propeller manufacture, GT Propellers of Riccione Italy, today announces good news for Australian YAK war bird owners. Following a detailed review from the Australian Warbirds Association Limited (AWAL), their YAK propellers have been approved for use in Australia. The approval of these YAK blades will enable aircraft owners with a V530 propeller hub to fit next-generation, high-performance propellers to their much loved YAK's and experience the performance increase that only wood and composite propellers can provide.

Subsequently AWAL has issued an amended YAK-52 maintenance schedule which clears the way to utilise these GT Propellers in Australian YAK's.

GT Propeller's YAK blades provide improved wood and composite technology with a proven track-history of reliability. Tests have shown that these propellers provide superior, trouble-free performance, easy assembly and maintenance - all with the added bonus of saving fuel. Music indeed for all aircraft owners.

GT Propellers was established more than 40 year ago in Italy and in that time has produced over 30,000 propellers. They remain the only Italian EASA certified propellers company.
